1. Introduction

This coursework implements Case Study 2: Travel Destination Explorer, re-themed as Interstellar Agency (Orion Apex) — a fictional premium space-tourism site. Visitors explore a catalogue of cosmic destinations, curated multi-stop packages and a fleet of spaceships, then submit a booking inquiry.

1. Key features:

- Nine HTML pages with a shared header, footer and theme toggle.
- 90 destinations in six categories, filterable and searchable.
- 15 packages and 15 spaceships, with detail pages driven by “URL ?id=.”
- Catalogue data stored in well-formed XML and rendered with JavaScript.
- Booking form using six form control types and custom JS validation (no HTML5 validation).
- Monochrome UI, responsive layout, and offline use by opening index.html locally.

2. Technical Discussion

Development followed separation of concerns: HTML for structure, one global CSS file for presentation, JavaScript for behaviour, and XML for data. Shared chrome (navigation, footer, chatbot) is injected once from js/app.js so every page stays consistent.

1. XML integration

Destination, package and spaceship records live in data/destinations.xml. For local file: demos, the same XML is embedded in data/destinations.js as DESTINATIONS_XML. getData() parses it with DOMParser and maps nodes into JavaScript objects used by the cards and detail pages.

Code sample:

```
const xmlDoc = new DOMParser().parseFromString(DESTINATIONS_XML.trim(), 'text/xml');
xmlDoc.querySelectorAll('destinations > destination').forEach(n => {
  destinations.push({
    id: n.getAttribute('id'),
    name: t(n, 'name'),
    category: t(n, 'category'),
  });
});
```

Figure 1 Destinations page showing XML-driven destination cards (All selected).

2. Category filtering (JavaScript)

On destinations.html, category buttons and a search box update state; renderDestinations() filters the array and rebuilds the grid. More than two filter options are supported (six categories plus “All”).

Code sample:

```
filterBar.querySelectorAll('.filter-btn').forEach(btn => {  
  btn.addEventListener('click', () => {  
    state.category = btn.getAttribute('data-category');  
    renderDestinations(data.destinations, state);  
  });  
});
```

Figure 2 Destinations page after applying a category filter.

3. Booking validation (JavaScript)

booking.html uses novalidate so the browser does not apply HTML5 validation. js/validation.js validates at least three fields with addEventListener: traveler name (length), email (must contain @ and a . after it), spacecraft (non-empty select), and travel class (a radio selected). On success the form is replaced with a confirmation message; on failure error messages are shown.

Code sample:

```
form.addEventListener('submit', (event) => {  
  event.preventDefault();  
  const ok = validateName() && validateEmail()  
    && validateSpacecraft() && validateTravelClass();  
  if (!ok) return;  
  bookingCard.innerHTML = successHTML;  
});
```

The screenshot shows the 'ORION APEX' website with a navigation bar containing links for HOME, DESTINATIONS, PACKAGES, SPACESHIPS, BOOK JOURNEY, and ABOUT. The main heading is 'BOOKING INQUIRY'. Below the heading, a message states: 'Complete the inquiry form below to request a premium interstellar travel consultation. The layout is organised in clear steps for easy review.'

The form is titled 'PASSENGER REQUEST DETAILS' and is divided into two sections:

- 1 TRAVELER INFORMATION**
 - TRAVELER NAME**: A text input field with the placeholder 'Enter full traveler name'. Below it is a red error message: '⚠ Please enter your full name.'
 - CONTACT ADDRESS**: A text input field with the placeholder 'Enter contact email address'. Below it is a red error message: '⚠ Please enter a valid email address.'
- 2 JOURNEY PREFERENCES**
 - PREFERRED SPACECRAFT**: A dropdown menu with the placeholder 'Select preferred spacecraft'. Below it is a red error message: '⚠ Please select a spacecraft.'
 - CLASS OF TRAVEL**: Three radio button options: 'Economy', 'Business', and 'First Class'. Below them is a red error message: '⚠ Please select a travel class.'

Figure 3 Booking form showing validation errors after invalid submit.

BOOKING INQUIRY

Complete the inquiry form below to request a premium interstellar travel consultation. The layout is organised in clear steps for easy review.

★ JOURNEY BOOKED SUCCESSFULLY

Your inquiry has been received, **samson**. A confirmation packet will be transmitted to your contact address within 24 standard hours.

Class: First Class

Add-ons: Cryo-Sleep Pod

The stars await. Safe travels.

Figure 4 Booking success message after valid submit.

3. Discussion of UX/UI principles/Applications/Justifications

1. Navigation Techniques

Folder structure (simplified):

ORION_APEX/

- index.html, destinations.html, packages.html, package.html, spaceships.html, spaceship.html, booking.html, about.html, terms.html
- css/global.css
- js/app.js, validation.js
- data/destinations.xml, destinations.js
- assets/

Navigation is a fixed top bar with links to Home, Destinations, Packages, Spaceships, Book Journey and About. The active page is marked with a CSS class and `aria-current="page"`. Detail pages (package.html, spaceship.html) map back to their listing in the nav so users still know which section they are in. A full breadcrumb trail was not added; instead, detail pages include a clear “back” link, which keeps the path short. On small screens a hamburger menu reveals the same links.

CSS sample:

```
.site-header { position: fixed; top: 0; left: 0; right: 0; }  
.nav-links a.active { /* underline / weight for current page */ }
```

2. Color balance/selection/consistency

The UI is deliberately monochrome (#000 / #fff) so full-colour space photography and the hero video provide the only colour. Borders use a low-opacity line token. Buttons share one outline style that fills and inverts on hover. Logo, icons and chat control stay black/white for consistency across all pages via CSS variables.

CSS sample:

```
:root { --bg: #000000; --text: #ffffff; --border: rgba(255,255,255,0.28); }  
:root.light { --bg: #ffffff; --text: #000000; }
```

3. Color Contrast Test

Black text on white (light mode) and white text on black (dark mode) both give a contrast ratio of 21:1, which exceeds WCAG AAA for normal text.

Contrast Checker

[Home](#) > [Resources](#) > Contrast Checker

Important!

There is currently [a critical bug](#) in version 150 of Chrome and Edge browsers on Windows that will cause the browser to become unresponsive when using a color picker eyedropper. This bug is patched in version 151 which is available in beta now and will be widely available July 15th.

Figure 5 Colour contrast test result (white text on black background).

4. Typography / consistency

Headings use Archivo (geometric, engineered feel); body text uses Inter (high legibility). Both are self-hosted as .woff2 files under assets/fonts/ and declared with @font-face, so the viva demo works offline. Heading hierarchy (h1–h3) and shared classes (.section-title, .btn) keep sizes and weight consistent; fluid clamp() sizes support responsive layouts.

CSS sample:

```
--font-head: 'Archivo', 'Arial Black', Arial, sans-serif;  
--font-body: 'Inter', system-ui, sans-serif;  
h1, h2, h3 { font-family: var(--font-head); }  
body { font-family: var(--font-body); }
```

5. Accessibility

- Text: semantic landmarks (header, nav, main, section, footer); logical heading order; visible focus via interactive controls.
- Images: meaningful alt text on content images; logo has an accessible name on the home link (aria-label).
- Forms: every control has a label (linked with for/id where applicable); errors are exposed in text near fields; novalidate is paired with clear JS messages rather than silent failure.
- Tables: spaceship specifications use a semantic table with th headers for screen-reader context.

HTML sample:

```
<label for="traveler-name">Traveler Name</label>  
<input type="text" id="traveler-name" name="traveler-name">
```

6. Accessibility Test

Figure 6 WAVE accessibility test result for the Home page

Figure 7 WAVE accessibility test result for the Booking page

- No critical missing-label issues were found on the booking form; contrast is high because of the monochrome palette)

4. Validation Reports

Home Page:

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

5. Evaluation of AI generated low fidelity wireframes

1. AI wireframe tools (UX Magic / similar) were used to produce low-fidelity layouts for the site pages. Because the finished website has nine HTML pages, wireframes were planned for all nine pages. The prompts and wireframe images are in the Appendix.
2. What AI got right: the tools captured the fixed top navigation, hero plus CTA pattern on Home, filter bar plus card grid on Destinations, package/ship card grids, and a stepped booking form structure close to the final enquiry page.
3. What AI got wrong / what we changed: early outputs sometimes looked like colourful dashboards or generic travel templates. The final site uses a strict monochrome black/white UI, shared header/footer injected by JavaScript, XML-driven cards, detail pages with back links instead of full breadcrumbs, and offline self-hosted fonts. We adjusted spacing, button style, and content sections (About FAQs, Terms legal blocks, spaceship spec table) by hand in HTML/CSS.
4. Inclusivity: high-contrast black/white supports readability; form controls have labels (and fieldsets for radio/checkbox groups); responsive grids and a mobile menu help small screens. Category image fallbacks keep cards usable when individual photos are missing.
5. Ethical considerations: AI wireframes are a starting point, not a substitute for human design judgement or accessibility testing. Prompts and outputs are disclosed in the Appendix. The fictional Interstellar Agency branding and final implementation were reviewed and built by us; we did not treat generated wireframes as finished accessible pages without validation and WAVE checks.

HOMEDESTINATIONSPACKAGESSPACESHIPSBABOUT

ABOUT THE AGENCY

Pioneering humanity's greatest adventure beyond the stars — 90 destinations and counting.

OUR MISSION

The Interstellar Agency was founded with a singular vision: to make deep-space travel accessible to all of humanity. With **90 certified destinations** across six cosmic categories — Nebulas, Stars, Natural Satellites, Non-Habitable Planets, Habitable Planets, and Black Holes — we offer the most comprehensive catalogue of interstellar voyages in known space.

Every destination in our catalogue has been scouted, surveyed, and certified by our elite corps of astro-navigators. From the Pillars of Creation to the event horizon of Sagittarius A*, each location is verified for safe transit.

OUR DESTINATIONS

Our growing catalogue spans the known universe, organised into six categories:

- **Nebulas** (15 destinations) — Stellar nurseries and supernova remnants, from the iconic Pillars of Creation to the delicate Veil Nebula

TERMS & CONDITIONS

Please read these terms carefully before booking your interstellar journey.

1. BOOKING AND RESERVATION

All bookings are subject to availability and confirmation by the Interstellar Agency. A deposit of 30% is required at the time of booking. Full payment must be received no later than 30 standard days prior to departure.

Bookings may be modified up to 14 days before departure, subject to a modification fee. Name changes are not permitted within 7 days of departure.

2. CANCELLATION POLICY

Cancellations made more than 60 days before departure will receive a full refund minus a 10% administrative fee. Cancellations between 30 and 60 days will receive a 50% refund. No refunds are available for cancellations made within 30 days of departure.

The Interstellar Agency reserves the right to cancel any booking due to unsafe spatial conditions, in which case a full refund or alternative passage will be offered.

8. Appendix: Screenshots of Low Fidelity Wire Frames

9. Appendix: Prompts

Prompt 1 — Home (index.html)

Create a low-fidelity grayscale desktop wireframe that matches this exact homepage structure for “Interstellar Agency / Orion Apex”.

Fixed top header bar: left logo box labeled “ORION APEX”, center horizontal nav links in this exact order — Home (underlined as active), Destinations, Packages, Spaceships, Book Journey, About — and a small circular theme-toggle icon on the far right.

Main content:

1. Full-viewport hero block under the header with a large centered headline “EXPLORE THE UNKNOWN”, a shorter subtitle paragraph under it, then two outline-style rectangular buttons side by side: “EXPLORE DESTINATIONS” and “VIEW PACKAGES”. At the bottom center of the hero, small text “SCROLL TO EXPLORE”.
2. Below hero: three equal bordered stat boxes in one row: “90 / Destinations”, “15 / Curated Packages”, “6 / Cosmic Categories”.
3. Below that: section title “FREQUENTLY VISITED TRAVEL PACKAGES AND PLACES” with an underline, then a 3-column card grid (show 6 card placeholders). Each card: top image rectangle, then title, small badge, star-rating line, 2-line description, two spec rows, price on the left and a small outline button on the right.

Footer: 4 link columns + social icon row + copyright “© 2145 Interstellar Agency”. Bottom-right: floating circular chat button. Grayscale wireframe only, no colour fills except light gray boxes.

Prompt 2 — Destinations (destinations.html)

Create a low-fidelity grayscale desktop wireframe matching this Destinations Explorer page for Interstellar Agency. Same fixed header as a travel site: logo left, nav links (Destinations underlined active), theme toggle right.

Content width centered (~1200px):

- Top row: left side large H1 “Destinations Explorer” + 2–3 lines of intro text; right side a wide search input with placeholder “Search destinations...”.
- Below: a horizontal filter bar of outline pill buttons in this exact order: All (filled/active), Nebulas, Stars, Natural Satellites, Non-Habitable Planets, Habitable Planets, Black Holes.
- Below filters: a results line “90 destinations shown”.
- Then a 3-column destination card grid (show at least 6 cards). Each card must match this anatomy: image area on top; card body with title + category badge on one row; star rating; short description; two spec rows labeled “Distance in Lightyears” and “Required Ship”; bottom row with price and an outline “Select” button.

Footer with 4 columns + chat bubble bottom-right. Grayscale low-fidelity only.

Prompt 3 — Packages list (packages.html)

Create a low-fidelity grayscale desktop wireframe for the Packages listing page of Interstellar Agency.

Same fixed header; Packages link active/underlined.

Centered content:

- H1 “Travel Packages”
- Short intro paragraph about 15 curated multi-stop expeditions and a Details button.
- No search bar and no filter pills on this page.
- 3-column card grid of package cards (show 6 placeholders). Each card: image on top; title + badge text “Package”; star rating; description; two specs “Duration” and “Stops”; bottom row price + outline button “Details”.

Standard multi-column footer and floating chat button bottom-right. Grayscale wireframe only, desktop.

Prompt 4 — Package detail (package.html)

Create a low-fidelity grayscale desktop wireframe for a Package Detail page of Interstellar Agency.

Same fixed header; Packages conceptually active.

Centered content:

- Top back link text: “← All packages”
- Detail hero in two columns: LEFT large media/image rectangle; RIGHT stacked content: small badge “Curated Package”, large H1 package name, star rating line, paragraph description, three spec rows (Duration, Destinations, Price), then an outline button “Book This Journey”.
- Next section title “Destinations On This Journey”, then a vertical/stacked list or grid of stop cards. Each stop card: small thumbnail left, right side destination name + category badge + one meta line (distance / ship / price).
- Next section title “Frequently Asked Questions”, then 5–6 accordion rows (question bar with expand indicator; one row can show open answer text).

Footer + chat bubble. Grayscale low-fidelity only.

Prompt 5 — Spaceships list (spaceships.html)

Create a low-fidelity grayscale desktop wireframe for the Spaceships fleet page of Interstellar Agency.

Same fixed header; Spaceships link active.

Centered content:

- H1 “Our Spaceships”
- Short intro about fifteen vessels and View Details.
- No filters on this page.
- 3-column ship card grid (show 6 cards). Each card: image top; title + class badge; star rating; description; two specs “Passenger Capacity” and “Cruising Speed”; bottom row fuel/source text + outline button “View Details”.

Footer + chat bubble bottom-right. Grayscale wireframe only.
